

Warsaw, 2nd November 2012

LETTER OF REFERENCE

We would like to share our opinion about the cooperation with SAGES/Pragmatists.

The opinion has been provided upon the contractor's request and concerns the conclusions from the execution of the Project of implementing AGILE methodology in Société Générale S.A. Branch in Poland.

The project covered:

- Assessment of the project environment;
- Carrying out individualized introductory trainings within the agile project management for the technical (IT, project management), operational and business departments of the bank;
- Direct support in planning, launching and execution of selected projects, in accordance with the AGILE recommendations.

The cooperation with SAGES/Pragmatists, which lasted for several months, proved to be satisfying and enabled us not only to learn about the agile project management, including such methods as SCRUM, XP, Kanban or Test Driven Development, but also to apply them in the pending bank projects.

Both the trainings and the follow-up workshops presented a high level of organizational structure.

The dedicated consultants presented a professional approach to the problems, high quality substantive knowledge and, above, all, a lot of practical experience visible in everyday work. The engagement and flexibility in the approach to the topic allowed a flexible adjusting of the scope of the introductory training to the changeable reality of the bank.

We can recommend the services of SAGES/Pragmatists with full responsibility, within trainings, implementation and consulting concerning agile project management.
